

300mA Low Noise High PSRR LDO with Shutdown

Description

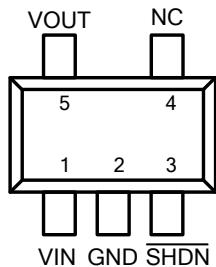

The FP6146 is a low dropout, low noise, high PSRR, very low quiescent current positive linear regulator. The FP6146 can supply 200mA output current with low dropout voltage at about 300mV that optimized for battery-powered systems or portable wireless devices such as mobile phones. The shutdown function can provide remote control for the external signal to decide the on/off state of FP6146 that consumes less than 0.1 μ A during shutdown mode.

The FP6146 regulator is able to operate with output capacitors as small as 1 μ F for stability. Other than the current limit protection, FP6146 also offers the on chip thermal shutdown feature providing protection against overload or any condition when the ambient temperature exceeds the maximum junction temperature.

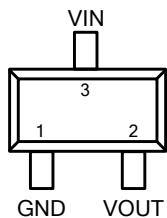

The FP6146 offers high precision output voltage of $\pm 2\%$. It is housed in low-profile, space-saving SOT-23-3, SOT-23-5, TSOT-23-5, TDFN-6 (1.6mmx1.6mm), SC-82-4 and SC-70-5 packages.

Pin Assignments

S5 Package (SOT-23-5)

S3 Package (SOT-23-3)

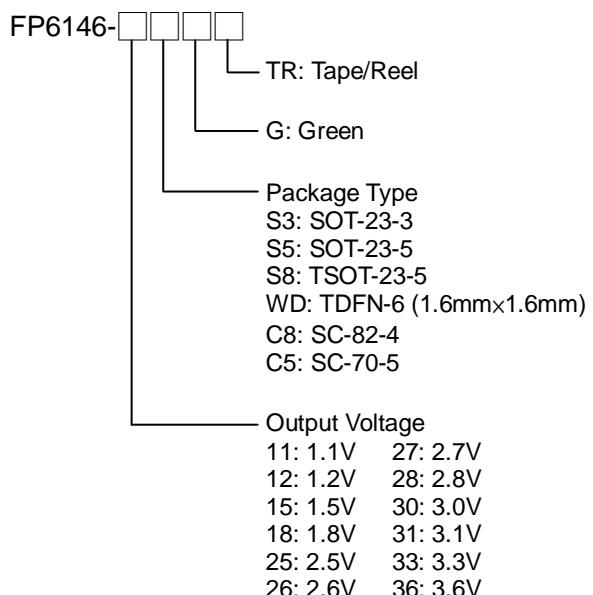

Features

- Low Dropout Voltage of 300mV at 200mA
- Low 30 μ Vrms Output Noise
- Guaranteed 300mA Output Current
- High Power Supply Rejection Ratio of 70dB at 10kHz
- Very Low Quiescent Current at 35 μ A
- Max. $\pm 2\%$ Output Voltage Accuracy
- Needs Only 1 μ F Capacitor for Stability
- Fast Response in Line/Load Transient
- Thermal Shutdown Protection
- Current Limit Protection
- Low-ESR Ceramic Capacitor for Output Stability
- Miniature Packages:
SOT-23-3, SOT-23-5, TSOT-23-5, TDFN-6 (1.6mmx1.6mm), SC-82-4 and SC-70-5
- RoHS Compliant

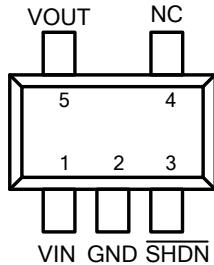

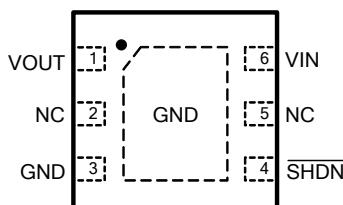

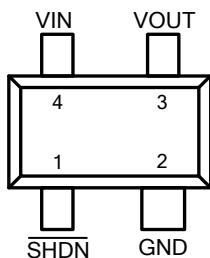

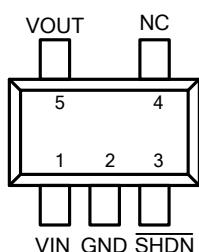

Applications

- Mobile Phones
- Notebook, Sub-Notebook and Tablet Computers
- DSC
- Portable Information Appliances
- Battery Power Systems

Ordering Information

Note 1: Please consult Fitipower sales office or authorized distributors for availability of special output voltages.

Figure 1. Pin Assignment of FP6146

Typical Application Circuit

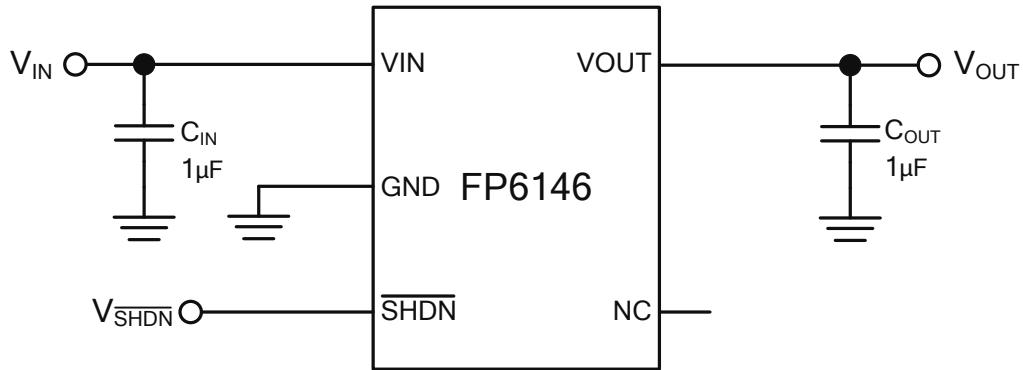

Figure 2. Typical Application Circuit of FP6146

Note 2: To prevent oscillation, it is recommended to use minimum $1\mu F$ X7R or X5R dielectric capacitors if ceramics are used as input/output capacitors.

Functional Pin Description

| Pin Name | Pin Function |
|-------------|---|
| VIN | Power is supplied to this device from this pin which is required an input filter capacitor. In general, the input capacitor in the range of $1\mu F$ to $10\mu F$ is sufficient. |
| VOUT | The output supplies power to loads. The output capacitor is required to prevent output voltage from oscillation. The FP6146 is stable with an output capacitor $1\mu F$ or greater. The larger output capacitor will be required for application with larger load transients. The large output capacitor could reduce output noise, improve stability and PSRR. |
| NC | No connection |
| GND | Common ground pin |
| SHDN | Pull this pin high to enable IC, Pull this pin low to shutdown IC. Floating this pin will be shutdown due to the built-in pull-low resistor. |

Note 4: The dropout voltage is defined as $V_{IN}-V_{OUT}$, which is measured when V_{OUT} drops 2% of its normal value with the specified output current.

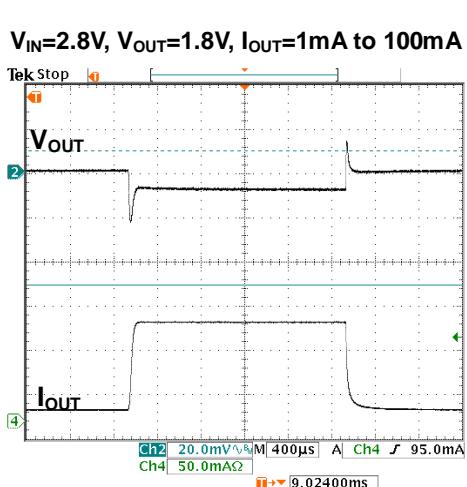

Note 5: Load regulation and dropout voltage are measured at a constant junction temperature by using a 40ms low duty cycle current pulse.

Note 6: Guarantee by design.

Application Information

The FP6146 is a low dropout linear regulator that could provide 200mA output current at dropout voltage about 300mV. Current limit and on chip thermal shutdown features provide protection against any combination of overload or ambient temperature that could exceed maximum junction temperature.

1. Output and Input Capacitor

The FP6146 regulator is designed to be stable with a wide range of output capacitors. The ESR of the output capacitor affects stability. Larger value of the output capacitor decreases the peak deviations and improves transient response for larger current changes.

The capacitor types (aluminum, ceramic, and tantalum) have different characterizations such as temperature and voltage coefficients. All ceramic capacitors are manufactured with a variety of dielectrics, each with different behavior across temperature and applications. Common dielectrics used are X5R, X7R and Y5V. It is recommended to use 1 μ F to 10 μ F X5R or X7R dielectric ceramic capacitors with 30m Ω to 50m Ω ESR range between device outputs and ground for stability. The FP6146 is designed to be stable with low ESR ceramic capacitors and higher values of capacitors and ESR could improve output stability. The ESR of output capacitor is very important because it generates a zero to provide phase lead for loop stability.

There are no requirements for the ESR on the input capacitor, but its voltage and temperature coefficient have to be considered for device application environment.

2. Protection Features

In order to prevent overloading or thermal condition from damaging the device, FP6146 has internal thermal and current limiting functions designed to protect the device. It will rapidly shut off PMOS pass element during over-temperature condition.

3. Thermal Consideration

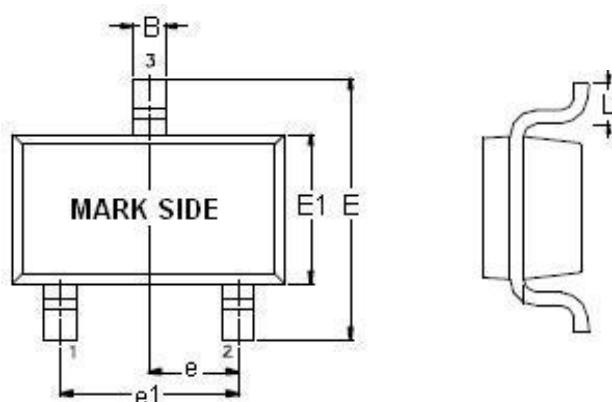

The power handling capability of the device will be limited by allowable operation junction temperature (125°C). The power dissipated by the device will be estimated by $P_D = I_{OUT} \times (V_{IN} - V_{OUT})$. The power dissipation should be lower than the maximum power dissipation listed in "Absolute Maximum Ratings" section.

4. Shutdown Operation

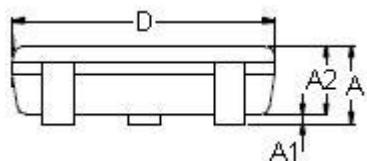

The FP6146 is shutdown by pulling the SHDN input low, and turned on by driving the SHDN high. If SHDN pin floating, the FP6146 will shut down because SHDN pin has built-in a pull low resistor (refer to Block Diagram).
