# AOT410L/AOB410L

100V N-Channel MOSFET  
SDMOS™

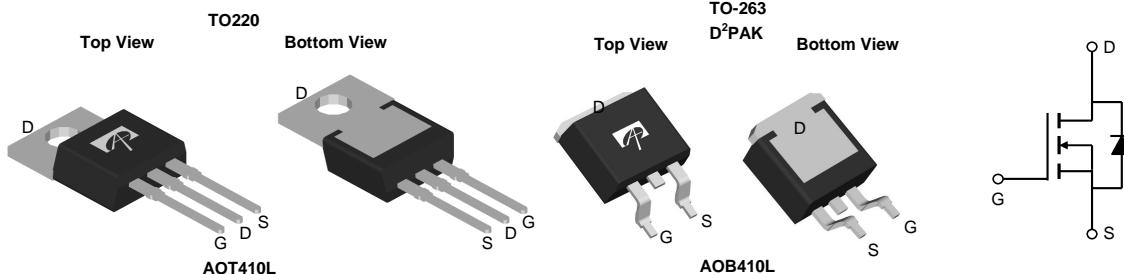

## General Description

The AOT410L/AOB410L is fabricated with SDMOS™ trench technology that combines excellent  $R_{DS(ON)}$  with low gate charge & low  $Q_{rr}$ . The result is outstanding efficiency with controlled switching behavior. This universal technology is well suited for PWM, load switching and general purpose applications.

## Product Summary

$V_{DS}$	100V
$I_D$ (at $V_{GS}=10V$ )	150A
$R_{DS(ON)}$ (at $V_{GS}=10V$ )	< 6.5mΩ
$R_{DS(ON)}$ (at $V_{GS}=7V$ )	< 7.5mΩ

100% UIS Tested  
100%  $R_g$  Tested

A. The value of  $R_{\text{DS(on)}}$  is measured with the device mounted on 1in<sup>2</sup> FR-4 board with 2oz. Copper, in a still air environment with  $T_A=25^\circ\text{C}$ . The Power dissipation  $P_{\text{DSM}}$  is based on  $R_{\text{DS(on)}}$  and the maximum allowed junction temperature of 150°C. The value in any given application depends on the user's specific board design, and the maximum temperature of 175°C may be used if the PCB allows it.

B. The power dissipation  $P_D$  is based on  $T_{J(\text{MAX})}=175^\circ\text{C}$ , using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used.

C. Repetitive rating, pulse width limited by junction temperature  $T_{J(\text{MAX})}=175^\circ\text{C}$ . Ratings are based on low frequency and duty cycles to keep initial  $T_J=25^\circ\text{C}$ .

D. The  $R_{\text{DS(on)}}$  is the sum of the thermal impedance from junction to case  $R_{\text{JC}}$  and case to ambient.

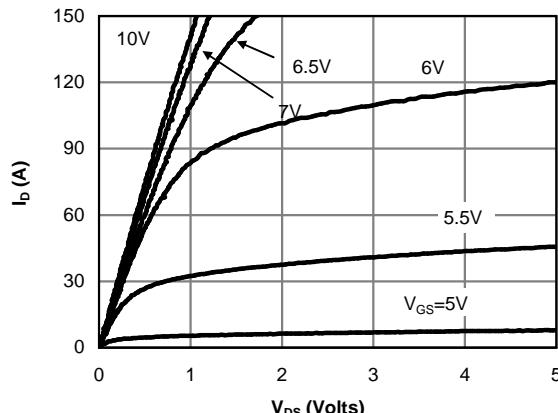

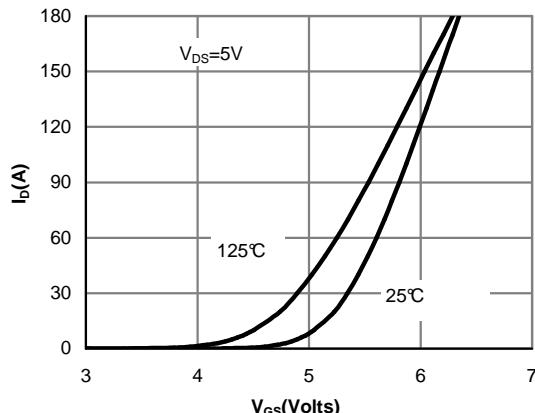

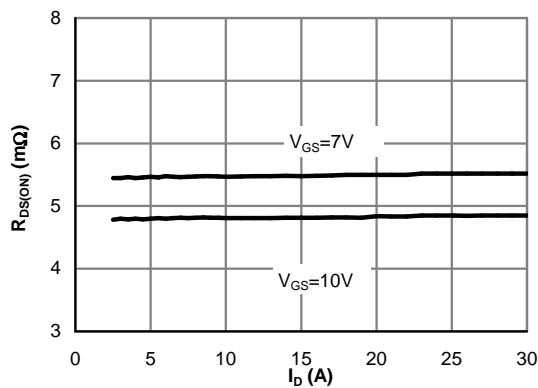

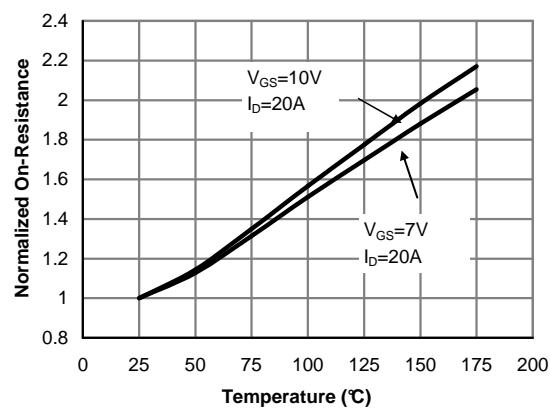

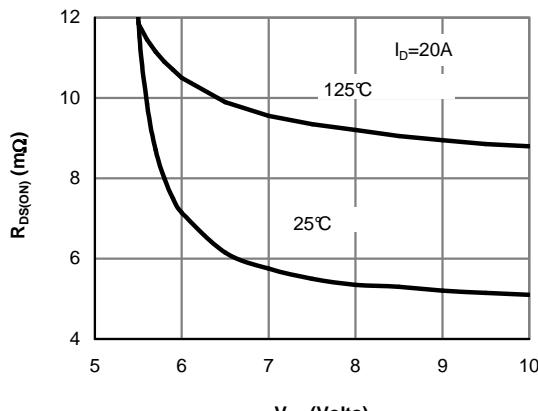

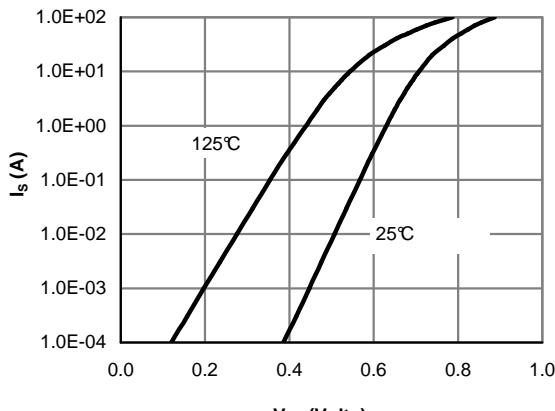

E. The static characteristics in Figures 1 to 6 are obtained using <300μs pulses, duty cycle 0.5% max.

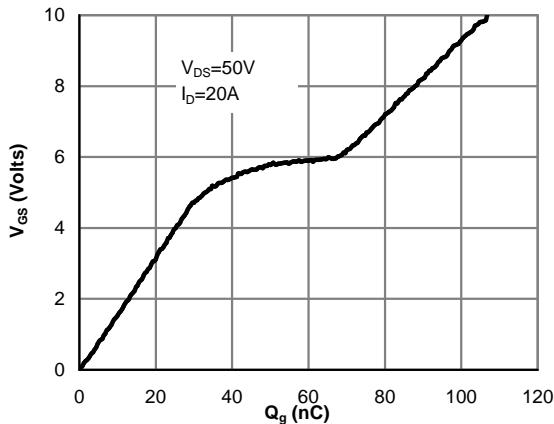

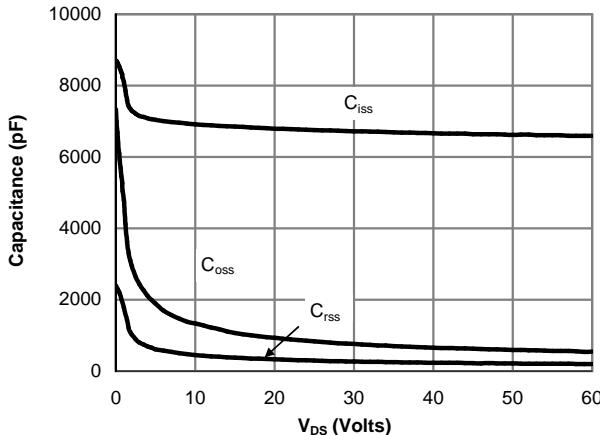

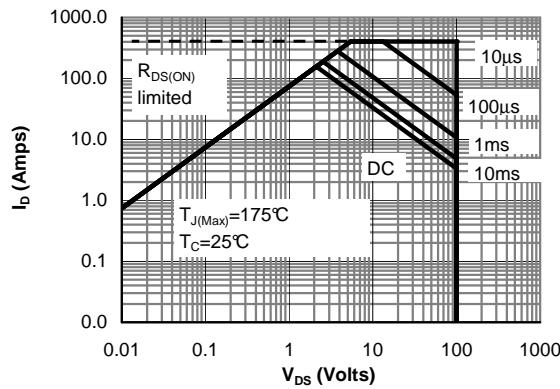

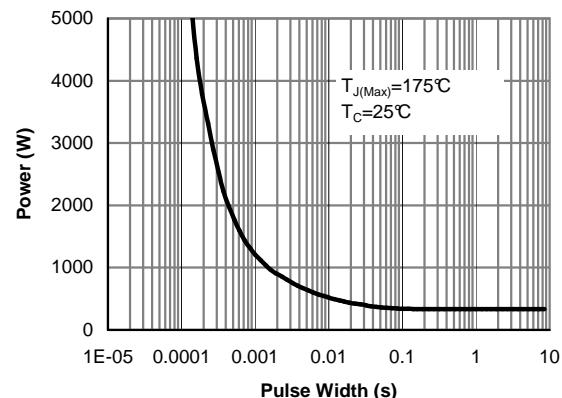

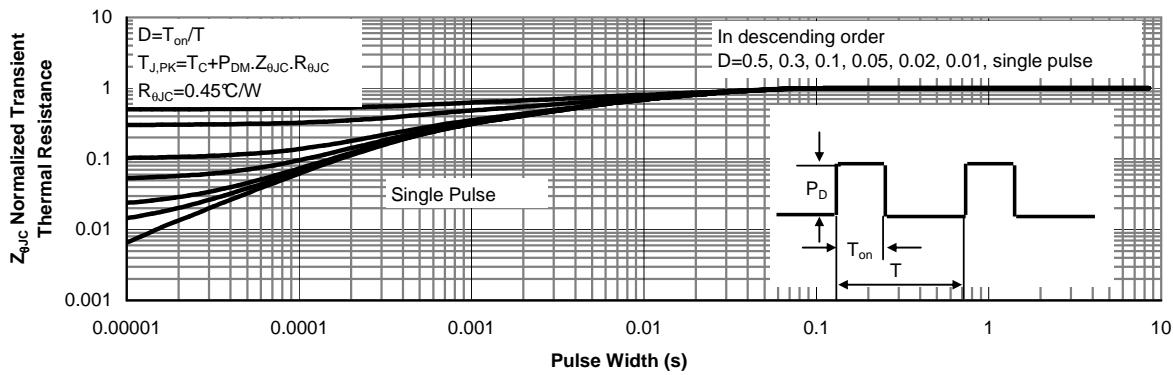

F. These curves are based on the junction-to-case thermal impedance which is measured with the device mounted to a large heatsink, assuming a maximum junction temperature of  $T_{J(\text{MAX})}=175^\circ\text{C}$ . The SOA curve provides a single pulse rating.

G. The maximum current limited by package is 120A.

H. These tests are performed with the device mounted on 1 in<sup>2</sup> FR-4 board with 2oz. Copper, in a still air environment with  $T_A=25^\circ\text{C}$ .
